

# NETWORKING PROJECT PROPOSAL

## CSE 3101 - COMPUTER NETWORKING

Project Title:  
Group-Chatting

**Submitted By:**

Name: Md Shamsur Rahman Sami

Roll No : 57

Name: Md Rakib Hossain

Roll No : 55

**Submitted On :**

# 1 Objectives & Motivation

The objective of this project is to create a multi-client chat application that allows multiple clients to connect to a server and communicate with each other in real-time. Additionally, the project aims to incorporate a file-sharing feature, enabling users to share files such as PDFs, images, or other documents. The motivation behind this project is to demonstrate proficiency in networking concepts, multi-threading, inter-process communication, and file handling while building a practical and useful application.

# 2 Technology to be Used

- Language: Python
- Framework: None (will utilize Python's built-in socket library for networking)
- Additional Libraries: None (to keep the project simple and focused)

# 3 Features to be Built

## 1. Server Class:

- Listens for incoming client connections
- Creates a new thread for each connected client
- Handles client disconnections gracefully

## 2. ClientHandler Class:

- Handles each client connection
- Reads messages from the client
- Broadcasts the messages to all connected clients
- Manages client disconnections

## 3. Client Class:

- Connects to the server
- Sends messages to the server
- Listens for messages from other clients
- Handles user input and display of received messages

- Supports file sharing: Allows users to send and receive files during the chat session

## **4 Networking Concepts to be Used**

- Socket Programming: Utilizing TCP/IP sockets for communication between the server and clients.
- Multi-Threading: Employing threads to handle multiple client connections simultaneously.
- Client-Server Architecture: Implementing a client-server model for communication.

## **5 Prospective Applications of the Project**

1. Learning Tool: The project can serve as a learning resource for understanding socket programming, multi-threading, inter-process communication, file handling, and incorporating additional features like file sharing.
2. Collaboration Platform: The chat application can be expanded to support collaborative work environments where users can exchange messages and share files seamlessly.
3. Remote Support: With file-sharing capabilities, the application can be utilized for providing remote assistance and support services where real-time communication and sharing of documents are required.
